JiXel

Your new toolbox for a Web 2.0 Control Room

JIXEL is a set of web-based tools, built on international standard communication protocols, that allows the management of any kind of emergency. From mass notification to data sharing, from collecting and sending information to resources management, JIXEL is the answer to all needs for managing events, being them small incidents or large-scale emergencies. It is a powerful suite that can be tailored on users needs, and is made of 4 integrated modules:

AGGREGATOR for receiving information from multiple channels about what is happening

MANAGER that offers a large set of functionalities for responding to events and managing resources
SHARE for exchanging information with other organisations

ALERTER for multi-channel mass notification and alerting of specific groups

www.jixel.eu

JiXel-Aggregator

AGGREGATOR connects your Emergency Management System with the world.
Social Media, our Apps, Emergency Services, public feeds and more, have never been closer.

Collect data from everywhere

JiXel-Manager

MANAGER empowers you to smoothly evaluate the situation, elaborate data, browse information, manage all your resources and assets and take the right decisions, quickly and confidently.

Manage any situation

JiXel-Share

SHARE allows organisations to efficiently exchange information, regardless of their IT legacy systems and operational procedures.
Using standard protocols was never more productive.

Share more

JiXel-Alerter

ALERTER allows you to send messages to everyone, using a wide choice of channels.
Radio, SMS, Social Media or App, you can reach whomever you need in a matter of seconds.

Send information to everyone
